

## WASHROOM SERVICES

*For the highest level of cleanliness and hygiene*

Providing a high standard of safety, cleanliness and style in the washroom has never been easier or more cost effective. Cannon Hygiene offers a complete and coordinated range of durable and innovative washroom products available in white or silver.

A clean, hygienic washroom says a lot about your company. It shows your business has high standards and that you place the health and safety of your staff and customers at the top of the agenda.

Why choose Cannon Hygiene for all your washroom requirements?:

- ✓ In a worldwide survey Cannon Hygiene came out on top in terms of value for money and for consistently acting in the best interests of customers.
- ✓ All Cannon Hygiene's products are designed to maximise hygiene. By choosing our complete product range you'll enhance the protection provided to your customers and staff.
- ✓ Choose the full Cannon Hygiene range and you'll benefit from product and hygiene innovation as well as complete design consistency in your washroom.
- ✓ By choosing one provider for all your washroom servicing you'll enjoy greater efficiencies, one invoice and reduced administration costs.
- ✓ Cannon Hygiene has branches nationwide.

To find out more about our washroom services, or any other Cannon Hygiene services, please call 0800 494 436 (freephone), email [enquiries@cannonhygiene.co.nz](mailto:enquiries@cannonhygiene.co.nz) or visit [www.cannonhygiene.co.nz](http://www.cannonhygiene.co.nz).

## Foam Soaps and Hand Sanitisers

Promote a clean-hands environment to prevent the spread of infection.

Cannon Hygiene dispensers are fitted with soap or hand sanitiser pouches that are hermetically sealed to avoid contamination. Product is dispensed through one-way valves to prevent clogs.

The levers are designed for one hand operation and feature Polygiene® anti-microbial silver ion technology which breaks the transmission path of diseases, making these dispensers some of the most hygienic on the market.

Our moisturising foam soap has a skin-neutral PH and is Green Seal certified. Our hand sanitising gel eliminates the risk of cross contamination, kills 99% of common germs and bacteria, dries quickly and freshens hands. Hand sanitiser is ideal for areas where water is not available - for example on the factory floor or in a waiting room - or in any area where extra hygiene protection is required.

## Fragrance Units

A washroom is judged by freshness of smell before cleanliness is ever taken into account.

### EcoFresh™

EcoFresh is the first air care system to use innovative, environmentally friendly fuel cell technology instead of a battery. The fuel cell powers the release of hydrogen into the refill chamber, the pressure of which means precise doses of fragrance molecules and odor neutralizer are continuously released and dispersed by the natural air movement within the room.

The unit contains no ozone depleting Volatile Organic Compounds (VOCs) or propellants, it contains no moving parts so operates silently, and the refill is completely recyclable.

### CannonFresh™

The CannonFresh aerosol fragrance unit incorporates an advanced concentrated CFC free air neutralising formula to deliver freshness on a pre-determined programmable schedule.

A choice of fragrances are available for both of these units.

## Toilet Seat Sanitiser

Extra protection from cross infection

### Seat Sanitiser Wipes

Sanitising wipes are another tool for reducing cross infection and maintaining washroom hygiene in-between cleans. Conveniently mounted next to the toilet, each stylish container holds 100 wipes.

### Seat Sanitiser Gel

Our Seat Sanitiser gel comes in an easy to use dispenser, reduces the risk of cross infection from toilet seats and gives staff and customers peace of mind. The gel dries in seconds to provide an effective pathogenic barrier.

## Toilet and Urinal Sanitisers

Eradicate germs, eliminate odours and remove unsightly scale and stains.

Our Auto Sanitiser unit works 24 hours a day on toilet and urinal bowls. The formulation actively attacks hard water and mineral deposits and minimises stain buildup. It also stops germs breeding and eliminates bad smells at the source for an odour free environment.

## Aquasan

An Aquasan unit prevents scale, stains and uric salts building up in your porcelain urinals, using live Bio-Enzymes instead of chemicals.

Aquasan works as a limescale inhibitor, preventing the buildup that leads to blocked pipes, flooding and frequent plumber callouts.

Urinal odours are caused by ammonia, produced by bacteria growth on uric salts. The natural enzymes in the Aquasan unit reduce this problem by penetrating uric salts, making them soluble and easily flushed away.

The cleansing effect of Aquasan means continual urinal flushing is no longer needed, allowing you to turn down the amount of water entering the cistern and substantially reduce your water bills. The solution freshens with a pleasant citrus fragrance, and Aquasan's unique hygiene seal stops any bad smells rising from below the urinal into the washroom.

## Deep Cleans

Surface buildup on urinals, toilet bowls, showers and handbasins is not a pleasant or hygienic look for your washroom.

Although daily cleaning with a disinfectant/cleaning solution will sanitise and remove dirt and grease from surfaces, it won't remove the buildup of uric salts and rusty streaks from corroded plumbing. A Deep Clean actually removes all the surface buildup as well as sanitising the whole area.

Our specialised personnel use a very specific acid cleaning process which requires expertise and extreme care. Our acidic Deep Clean solution penetrates deep into the effluent system, helping to reduce unpleasant odours and assisting the freeflow of toilet wastes.

A Cannon Hygiene consultant will assess the condition of your washroom facilities and recommend the correct programme. We'll carry out an initial Deep Clean and follow it up with a maintenance service at intervals appropriate to your needs.
