

## WASHROOM SERVICES

*For the highest level of cleanliness and hygiene*

# Foam Soaps and Hand Sanitisers

Promote a clean-hands environment to prevent the spread of infection.

Cannon Hygiene dispensers are available as automatic (500ml or 1100ml) or manual (800ml), and are fitted with soap or hand sanitiser pouches that are hermetically sealed to avoid contamination. Product is dispensed through one-way valves to prevent clogs.

The automatic unit is completely touch-free, reducing the spread of germs and cross-contamination.

The levers on the manual dispensers are designed for one hand operation and feature Polygiene® anti-microbial silver ion technology which breaks the transmission path of diseases, making these dispensers some of the most hygienic on the market.

Our moisturising foam soap has a skin-neutral PH and is Green Seal certified. Our hand sanitiser eliminates the risk of cross contamination, kills 99% of common germs and bacteria, dries quickly and freshens hands. Hand sanitiser is ideal for areas where water is not available - for example on the factory floor or in a waiting room - or in any area where extra hygiene protection is required.

# Fragrance Units

A washroom is judged by freshness of smell before cleanliness is ever taken into account.

## EcoFresh™

EcoFresh is the first air care system to use innovative, environmentally friendly fuel cell technology instead of a battery. The fuel cell powers the release of hydrogen into the refill chamber, the pressure of which means precise doses of natural fragrance molecules and odour neutralizer are continuously released and dispersed by the natural air movement within the room.

The unit contains no ozone depleting Volatile Organic Compounds (VOCs) or propellants, it contains no batteries or moving parts so operates silently, and the refill is completely recyclable.

## CannonFresh™

The CannonFresh aerosol fragrance unit is the most effective odour neutralising system through its sophisticated fragrancing 'Microtrans' technology. It incorporates an advanced concentrated CFC free air neutralising formula to deliver freshness on a pre-determined programmable schedule.

A choice of fragrances are available for both of these units.

# Toilet Seat Sanitiser

Extra protection from cross infection

## Seat Sanitiser

Our Seat Sanitiser comes in an easy to use 400ml dispenser. It reduces the risk of cross infection from toilet seats and gives staff and customers peace of mind. The sanitiser dries in seconds to provide an effective pathogenic barrier.

The lever on the dispenser is designed for one hand operation and features Polygiene® anti-microbial silver ion technology which breaks the transmission path of diseases, making this dispenser one of the most hygienic on the market.

# Toilet and Urinal Sanitisers

Eradicate germs, eliminate odours and remove unsightly scale and stains.

Our Shake & Wake toilet bowl/urinal sanitiser contains a unique probiotic formula which works 24 hours a day on toilet and urinal bowls. The formulation actively attacks hard water and mineral deposits and minimises stain buildup. It also stop germs breeding and eliminates bad smells at the source for an odour free environment. Saves on maintenance costs and washroom downtime.

# Aquasan

An Aquasan unit prevents scale, stains and uric salts building up in your porcelain urinals, using live Bio-Enzymes instead of chemicals.

Aquasan works as a limescale inhibitor, preventing the buildup that leads to blocked pipes, flooding and frequent plumber callouts.

Urinal odours are caused by ammonia, produced by bacteria growth on uric salts. The natural enzymes in the Aquasan unit reduce this problem by penetrating uric salts, making them soluble and easily flushed away.

The cleansing effect of Aquasan means continual urinal flushing is no longer needed, allowing you to turn down the amount of water entering the cistern and substantially reduce your water bills. The solution freshens with a pleasant citrus fragrance, and Aquasan's unique hygiene seal stops any bad smells rising from below the urinal into the washroom.

# Washroom Deep Clean

Surface buildup on urinals, toilet bowls, showers and hand basins is not a pleasant or hygienic look for your washroom.

Although daily cleaning with a disinfectant/cleaning solution will sanitise and remove dirt and grease from surfaces, it won't remove the build up of uric salts and rusty streaks from corroded plumbing. A Deep Clean actually removes all the surface build up as well as sanitising the whole area.

Our specialised personnel use a very specific acid cleaning process which requires expertise and extreme care. Our acidic Deep Clean solution penetrates deep into the effluent system, helping to reduce unpleasant odours and assisting the freeflow of toilet wastes.

A Cannon Hygiene consultant will assess the condition of your washroom facilities and recommend the correct programme. We'll carry out an initial Deep Clean and follow it up with a maintenance service at intervals appropriate to your needs.
